## **Cal Conduit Introduces Stainless Steel EMT**

Downey, CA – Stainless steel EMT conduit is one of several new and innovative products in the most recent catalog of the Calbrite™ line of UL-listed and compliant stainless steel electrical conduit fittings and accessories from Cal Conduit Products.

“We believe Cal Conduit Products is the only company currently manufacturing stainless steel EMT -- electrical metallic tubing – conduit,” said Dan Markus, president of the firm.

The thinner walled EMT stainless steel conduit is used in applications subject to less danger from wear and tear and environmental hazards such as forklift traffic, hand trucks and carts and other conditions typically found in an industrial setting. These are often referred to as “above-the-door” applications. Stainless steel EMT conduit is less costly than rigid conduit but still offers all the benefits of stainless steel. These include superior performance in corrosive environments and applications subject to harsh chemical treatments or washdowns.

Electrical contractors and electricians can offer their clients significant cost savings by specifying Calbrite stainless steel EMT conduit in the appropriate applications and remain confident that they are getting all the benefits of stainless steel for their application.

The EMT conduit is complemented by a new line of stainless steel EMT compression fittings.

Other new products in the Calbrite stainless steel catalog include stainless steel single gang junction boxes, stainless steel junction box covers and plates and chase nipples. All new products come in a wide range of sizes, listed in the catalog in both U.S. standard and metric sizes.

“The addition of these products reinforces the expansiveness of the Calbrite line, making Cal Conduit Products a one-stop destination for stainless steel conduit, fittings and accessories,” concluded Markus.

Cal Conduit Products is a UL-listed manufacturer of conduit and conduit fittings (UL file number E230584). Calbrite type 304 and 316 UL-listed stainless steel conduit meets and exceeds current requirements for washdown and is food-safe and potable water-safe and satisfies the strictest mandates for plant cleanliness by HACCP, FDA, various state agencies and hundreds of other regulatory requirements.

Cal Conduit Products is headquartered in Downey, CA, with manufacturing plants in Los Angeles and Hammond, IN. For a copy of the new catalog or more information, contact Rob Reiter, national sales manager, at 800-225-7473.
